①

Economics of the Solidi Coin

- A member can spend money to **pump up** his reputation. As reputation gets higher, it is increasingly harder to increase one unit of reputation, following an **exponential** curve: e^{kR} is required to increase one unit of R , where R is reputation, k is a scaling constant, eg. $1/1000$.
- Every time a member likes a comment, the creator of the comment get +1 unit reputation, while the sender gets $\frac{1}{100}$ deduction in reputation, ie 0.01 unit.
- 由于 exponential conversion, 当某会员得到了稍为可观的声誉, 就很有可能 cash-out (withdraw), 获得现金, 而导致平台因缺乏现金而崩盘。
- 有个解决办法是: cash-out 是根据 整体 声誉 的比例 计算的。当现金储备很少的时候, cash-out 微不足道。

Anti-racism

- Do Africans watch YouTube? Yes.
- When people watch YouTube, traffic goes to YouTube, so do revenues.
- **Competition is global**, whether we're willing or unwilling.
- Generally speaking, we have to be **10× better** than YouTube to re-direct traffic to our site. How is that possible? Small, trivial features are insufficient.
- Currently there are some “**black-hearted**” software that are subtly racist. For example, YouTube has the ability to mask your comments so others cannot see them, **without** the commenter knowing. People who comment on YouTube may be talking into a black hole. Another example: ClubHouse has a feature that if just **one** member in a room dislikes you, you can be kicked out and unable to find that room, nor can you tell who kicked you out. Such a feature means that **censorship** can be easily and anonymously achieved, which is especially useful to racist / bigotry groups.
- **Subtle racism** may look small and innocuous, but they are a **huge** thing. Users who are pissed off will forever have a bitter feeling towards the black-hearted software. This is where we can out-perform YouTube.
- Don't get me wrong – I have friends in America and I love Americans. But we cannot unconditionally love racists. We have to **split** America into racists and non-racists – that is critical to our **survival**. It's either racists cry or racists make us cry. Let it be the first option.
- USA is a very advanced country, they have freedom of speech and democracy. YouTube also respects freedom of speech to a certain extent, but they do not have an explicit policy that guarantees that racial equality is upheld and that truthful comments will always not be banned. That is our single most significant competitive advantage, IMO. What if YouTube adopts the same policy as ours? They can, in theory. But America's **democracy works very slowly**. For example, Israel is a racist, apartheid state but USA continues to support Israel with a double standard towards Palestinians. It remains to be seen if the next president(s) will change the course of US foreign policy. A similar situation may happen inside YouTube or other US corporations. Their democracy may cause their products to be racist, due to their constituency, for at least quite some time to come. That is the opportunity for us to make money.
- We have to **explicitly** state our anti-racist policy and the guarantee of no-banning of contents, and **well-publicize** this. Users will feel the difference and be attracted to use our site.
- You may ask: why would an **African** organization help fight global racism? Why not just focus on Africa? The same question applies to China, India, Iran, Russia, ... etc. The problem is that if we all think our own country is “**special**” then we can never address the problem of racism and we will continue to live under racism and suffer from its oppression. Everyone think they are “special” but then they become themselves racist and as bad as our oppressors. And we won't win as long as we don't face the problem of racism.
- Some people of colored skin may get **angry** at my proposal because they think their suffering of racism was **greater**, and that by equalizing the **playing field** I am ignoring the differences of sufferance in different historical trajectories. This is a complex issue that relates to making **reparations** for past events. I am not making **pre-mature** conclusions on this. Let's do things one at a time, and we can agree to creating a level playing field despite other complexities.
